Full-Stack Software Developer | 4 Years Total Experience (2.5+ Years Full-Stack) | Scalable & Performant Web Applications

Experience

Product Developer

Aug 2025 – Present

Inncircles Technologies

Hyderabad, India

- **Custom Search Builder:** Implemented a dynamic query construction engine enabling users to build complex, multi-condition search queries at runtime, translating visual inputs into optimized backend queries for flexible and performant data retrieval.
- **Microservices Architecture:** Built and maintained RESTful and **gRPC-based APIs** within a microservices framework, ensuring clear service boundaries, independent deployability, and reliable inter-service communication.
- **Naming Framework Service:** Built a scalable naming framework using **Redis** for backend caching and **Redux** for frontend state management, enabling consistent entity resolution across modules.
- **Payment Integration:** Implemented end-to-end payment feature via **Razorpay API**, covering secure transaction processing and webhook-based verification.

Software Developer

Sep 2023 – Jul 2025

Gotisheel Technologies

Hyderabad, India

- **AI Job Queue System:** Architected an API call queuing system for high-volume AI workloads (Object Detection, OCR, LLMs), **reducing AI-related failure rates by 50%+** and eliminating system overload incidents.
- **API Performance:** Designed high-performance REST APIs using **MongoDB Aggregation** with LRU caching in Node.js/Express, **improving query performance by 30%+** and reducing redundant DB calls.
- **Computer Vision Safety System:** Built a configurable access control system integrating **face recognition, PPE detection, alcohol detection, and vehicle plate recognition** with IoT-controlled boom barriers.
- **Analytics Dashboards:** Developed React.js dashboards with AG Charts and Redux Toolkit for multi-day report views featuring pagination, debounced search, and optimized sorting; built Node.js mailing service for automated daily stakeholder reports.

Area Service Manager

Sep 2021 – Mar 2023

Bajaj Auto Ltd

India

- Leveraged **Power BI NPS dashboards** and CDMS data analysis to identify service quality root causes, achieving a **10% reduction in customer complaints** in Q4 vs. Q3 FY21-22.
- Reviewed Field Failure Reports (FFRs) and escalated critical issues to CQA and R&D teams, driving continuous product improvement cycles.

Technical Skills

Languages: JavaScript (ES6+), TypeScript, Python, HTML5, CSS3

Frontend: React.js, Next.js, Redux Toolkit, React Native

Backend: Node.js, Express.js, gRPC, REST APIs

Databases: MongoDB, Redis

Cloud & DevOps: AWS, Docker, Git, CI/CD

Concepts: Data Structures & Algorithms, Microservices, System Design, Agile

Projects

Drag & Drop UI Builder | *React.js, Ant Design, Code Generation* | [Live Demo](#)

- Built a no-code platform enabling users to visually construct UI layouts via drag-and-drop, with automatic React code generation for export.

Real-Time Chat Application | *React.js, Firebase, Google Auth* | [Live Demo](#)

- Developed a full-featured real-time chat app with Firebase authentication, live messaging via Firebase Realtime Database, and responsive UI design.

Education

National Institute of Technology, Silchar

Jul 2017 – Jun 2021

Bachelor of Technology, Mechanical Engineering

Achievements

1st Place – HPVC Asia Pacific 2020 (Male Sprint): Captained a **14-member interdisciplinary team** through end-to-end design, engineering, and development of a human-powered vehicle competing at the international level.

Academic Projects

Nano-dynamics of Cancer Cells – ML Approach | *Python, Machine Learning*

- Built an ML model to analyze the correlation between breast cancer cell vibrational frequencies and mechanical properties, enabling predictive biomechanical insights.
